Data Science Salary Analysis

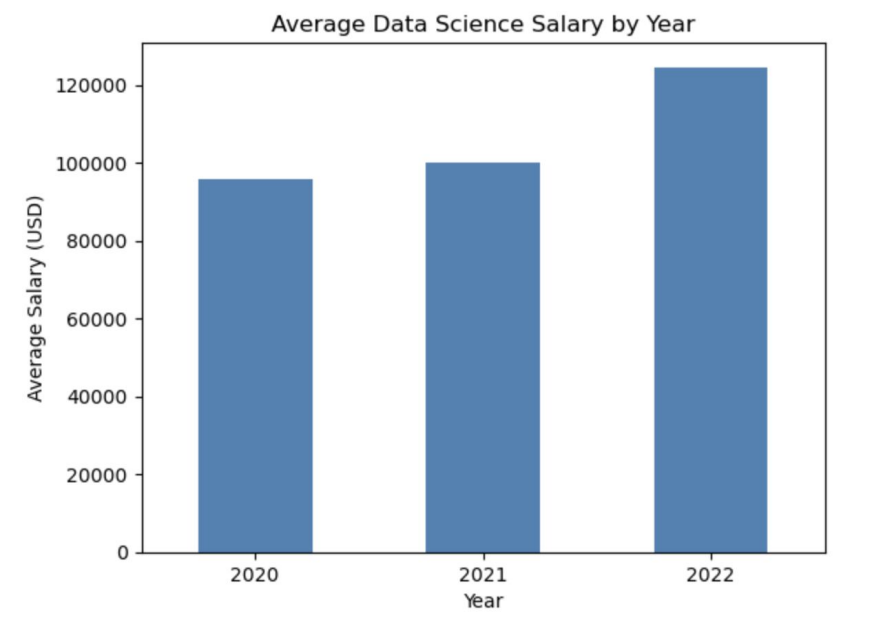
A Market Analysis and Hiring Recommendation

04/18/2026

Ciara Ryan

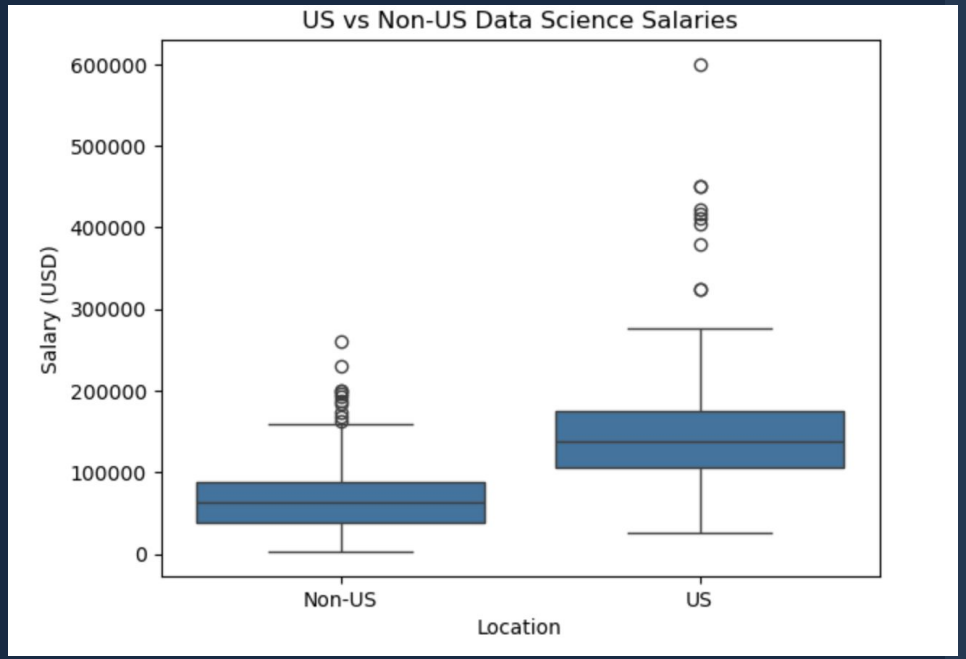
Data Science Salaries Are Rising Rapidly

- Average salary grew 30% from 2020 to 2022
- Market is highly competitive and accelerating
- Acting now is critical to attract top talent



US-Based Talent Commands a Premium

- US data scientists earn $149K on average vs $68K globally
- US median salary is $138K
- Hiring offshore is an option but comes with tradeoffs in coordination and talent pool

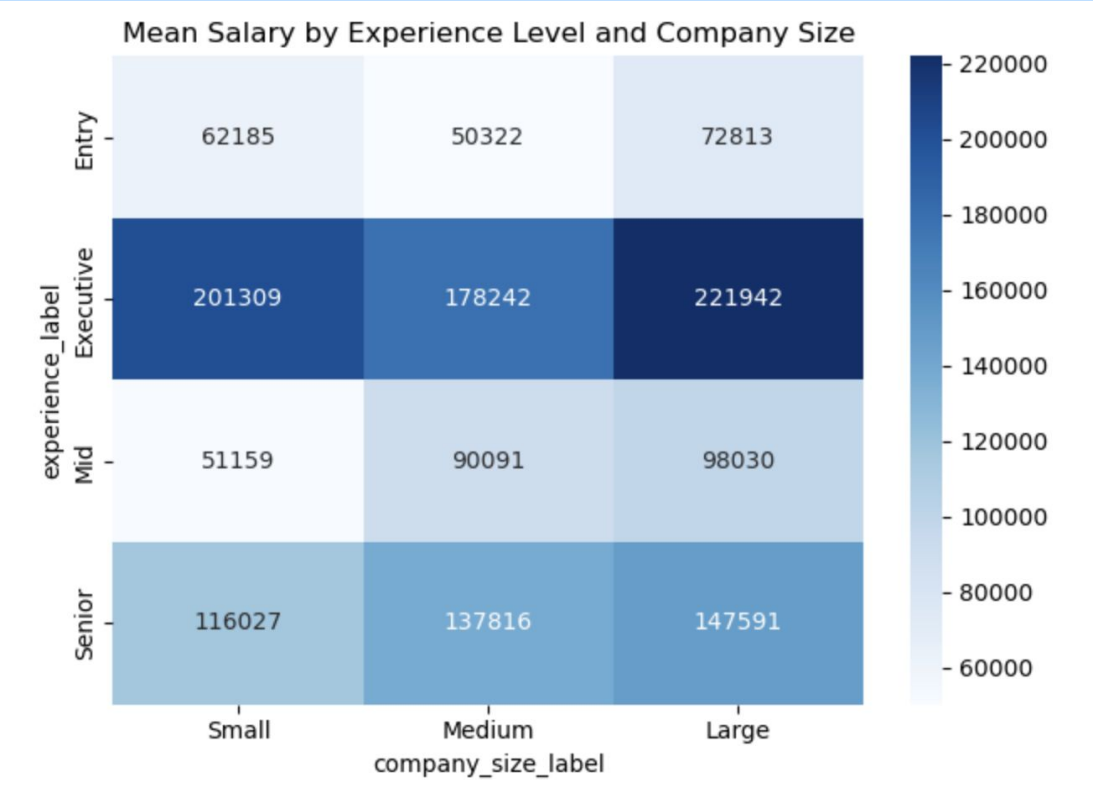


Experience Level Drives Salary Significantly

- Entry level averages $99K in the US
- Senior level averages $154K in the US
- Executive level averages $250K in the US
- For a lead role who can build a team, Senior or Executive level is recommended

Company Size and Experience Both Impact Salary

- Larger companies pay more at every experience level
- As your company grows, salary expectations will increase
- Budget should account for company growth trajectory



My Recommendation

- For a Senior Data Scientist to lead the team: **budget $150K-$175K**
- For an Executive/Director level hire: **budget $225K-$275K**
- Offer remote work → 70% of data scientists in this dataset work remotely, so not offering it limits your talent pool
- Revisit salary annually given the rapid market growth
